Andrés Álvarez de Cienfuegos

Information & Data Security Manager

Madrid, Spain · andres.acienfuegos@gmail.com · linkedin.com/in/aacienfuegos · github.com/aacienfuegos · acienfuegos.com

PROFESSIONAL SUMMARY

Telecommunications Engineer specialising in data protection, information security governance and business continuity. I define how data is protected across the global areas of an international bank and take it down to where it applies: to the technology that stores it and the business that uses it. Before that, cybersecurity continuity and resilience from the consulting side, for clients in banking, public sector, telecommunications and automotive.

PROFESSIONAL EXPERIENCE

Information & Data Security Manager

BBVA · Madrid, Spain · May 2024 – Present

- Data security governance across more than 100 applications rated critical by confidentiality level: information classification and personal data privacy (GDPR), over technologies ranging from legacy systems to public cloud and AI-based applications.
- Designed and led the group's information outflow governance model: every way of sharing data with third parties reduced to four channels and two central tools. Written, defended and driven through to rollout.
- Data loss prevention (DLP) controls on end-user devices, focused on giving the business a safe route rather than blocking it, and on explaining the risk in its own terms.
- Stakeholder management across twelve different business areas, engineering, global security and the security teams of fifteen geographies. Management of a five-person external team.

Cybersecurity Continuity and Resilience Consultant

GMV · Madrid, Spain · October 2022 – May 2024

- Business continuity and resilience for clients in banking, public sector and telecommunications: business impact analysis (BIA), continuity and disaster recovery plans (BCP/DRP) and the exercises that put them to the test.
- Auditing, as part of the audit team, of information security management systems (ISO/IEC 27001, ENS) and business continuity management systems (ISO 22301), including the Vodafone audit.
- BMW — autonomous driving: built on the vehicle's existing threat assessment and remediation analysis (TARA), starting from its GNSS positioning system, under the UNECE R155 framework. Support to project management, technical team coordination and direct client contact.
- BBVA — Data Security: design of cybersecurity controls over ungoverned End-User Computing (EUC NG) for BCBS 239 compliance.

Cybersecurity Intern

ACCIONA · Madrid, Spain · October 2021 – July 2022

- Support to the security teams, automation of internal processes in Python and development of a visual mapping tool on top of MITRE ATT&CK to aim the pentesting exercises.

EDUCATION

BSc in Telecommunication Technologies and Services Engineering

Universidad Politécnica de Madrid · Telematics · Bilingual Academic Programme · September 2018 – July 2022

Final degree project: the MITRE ATT&CK mapping tool built at ACCIONA — database, API, interface and containers — validated against four use cases, from threat intelligence to adversary emulation.

CERTIFICATIONS AND AWARDS

- ISO 22301 Lead Implementer — BSI, 2023
- UNECE R155, Vehicle Cybersecurity — Advanced Fleet Management Consulting, 2022
- C1 Advanced — Cambridge English, 2017
- RYLA leadership programme — Rotary International, Iowa (USA), 2016

SKILLS

Governance and risk: information classification, security policy and standards, risk analysis, compliance, ISO 27001, ISO 22301, ISO 31000, ENS, BCBS 239, UNECE R155.

Data protection: data loss prevention (DLP), privacy and personal data protection (GDPR), information outflow governance, access control, endpoint security.

Continuity and resilience: business impact analysis (BIA), business continuity (BCP) and disaster recovery (DRP) plans, testing and exercising, crisis management.

Technical security: threat modelling and TARA, MITRE ATT&CK, vulnerability management, hardening (CIS Benchmarks), network segmentation, detection and response (SIEM).

Technology: Python, Bash, SQL, Linux, Docker, Git, CI/CD, networks and protocols, public cloud.

Languages: Spanish (native) and English (Cambridge C1 Advanced, high school year in the USA and bilingual university degree).

PERSONAL PROJECTS AND INFRASTRUCTURE

- Homelab distributed across two locations, with nine virtualised machines, eighteen services and five network segments, plus a lab environment isolated from production: Proxmox, Docker, OpenWrt, Traefik, Authentik, Wazuh, CrowdSec and Cloudflare.
- TripPlanner — web and Android trip planning application (Next.js, Expo, PostgreSQL), deployed with continuous integration and automatic updates to the staging environment.
- AgentOS — AI agent orchestration platform (FastAPI, Redis, ARQ) to automate deployments and documentation, with a constrained development workflow and changes confined to the lab environment.
